GLA University, Mathura Department of Computer Engineering & Application

Lecture Delivery Plan (Blowup or LDP)

B.Tech (CSE All Specialization and Hons) Year: 1st Year Semeseter: Even Session: 2023-24

Subject Name & Code: Computer Programming-II BCSC 0063

Week/Hrs: 2Lectures/Week. Subject Credit: 2

Name of Subject Coordinator: Mohd Amir Khan GLA118309

Module 1: Introduction to Object-Oriented Programming and GUI (16 Hrs)

Prerequisites for Module 1:

Course:

Introduction to Object-Oriented Programming, Programming Fundamentals: Basic understanding of programming concepts (variables, loops, conditionals). Familiarity with a programming language such as Python, Java etc.

Object-Oriented Concepts: Understanding of basic concepts like functions, data types, and control structures. Awareness of the importance of code organization and reusability. Recommended Reading/Preparation: Introduction to Python programming language (if Python will be used in the course).

Online tutorials or introductory books on Object-Oriented Programming.

Lecture Number	Topic	Pre-Reading Material	Subtopics	Post-Reading Material	Learning Methodology/Activity	Learning Outcomes
Lecture 1	Basics of OOP	Intro to Programming Paradigms	 OOP Overview Key Concepts: Classes, Objects 	OOP Principles Review	Lecture, Discussions	- Understand the concept of OOP and its significance in software development
Lecture 2	Classes and Objects	Basic Python Concepts	- Class Definition Creating Objects	Code Samples, Exercises	Discussions on the significance of OOP in software development	- Define classes and create objects, grasp instance variables and methods
Lecture 3	Methods	Understanding Instances	- Instance Variables - Instance Methods	Practice Problems	Implement instance variables and methods in classes, differentiate their usage	
Lecture 4	Constructors and Destructors	Initializing Objects	- Constructor Methods - Destructor Methods		Review of OOP principles and their application	Grasp key OOP concepts, including classes, objects, attributes, and methods.
Lecture 5	Class Attributes and Methods	Exploring Class-level Elements	- Class Attributes - Class Methods	Problem-Solving Tasks, Code Development	Implement class attributes and methods, understand their scope and usage	
Lecture 6	Inheritance: Creating Subclasses	Extending Class Functionality	- Subclasses and Superclasses	Activities	Implement inheritance, create subclasses, and use superclass functionalities	Understand method overriding and modify
Lecture 7	Overriding Methods in Subclasses	Modifying Inherited Behavior	- Method Overriding	Code Samples, Practice Problems	Understand method overriding in subclasses, modify inherited methods	inherited methods
Lecture 8	Method Resolution Order (MRO)	Resolving Inherited Methods	- Understanding MRO	Case Studies, Discussions	Discussions on method resolution order (MRO)	Understand method overriding in subclasses, modify inherited methods
Lecture 9	Polymorphism and Its Use Cases	Utilizing Polymorphic Behavior	- Polymorphism Examples	Coding Tasks, Scenario Analysis	Scenario analysis and code development for implementing interfaces and abstract classes	- Apply polymorphism in various scenarios, understand its practical use cases
Lecture 10	Encapsulation: Data Hiding	Protecting Data	 Access Modifiers Hiding Techniques 	Code Development, Problem-Solving Tasks	Code development and problem- solving tasks for data hiding and access modifiers	- Implement data hiding and access control in Python classes, use access modifiers
Lecture 11	Encapsulation: Getter and Setter Methods	Controlling Attribute Access	- Getter and Setter Methods	Hands-on Exercises, Code Implementation	Hands-on exercises to create getter and setter methods	- Create getter and setter methods to access and modify class attributes
Lecture 12	Abstraction: Abstract Classes	Defining Abstract Structures	- Abstract Class Definition	Coding Tasks, Conceptual Exercises	Scenario analysis and code development for implementing interfaces and abstract classes	- Define and use abstract classes in Python, understand their role in abstraction
Lecture 13	Abstraction: Interfaces and Implementation	Defining Interface Contracts	- Implementing Interfaces and Abstract Classes	Problem-Solving Scenarios, Code Development	Implement interfaces and abstract classes, adhere to interface contracts in Python	- Implement interfaces and abstract classes, adhere to interface contracts in Python
Lecture 14	Introduction to GUI Programming	Importance of GUIs in Software Development	- Overview of GUI Frameworks	Setting up GUI Development Environment	Presentation on the significance of GUIs in software development	- Recognize the importance of GUIs, understand available GUI frameworks in Python
Lecture 15	GUI Frameworks in Python	Exploring Tkinter, PyQt, wxPython	- Features and Setup	GUI Development Projects, Hands-on Sessions	Hands-on sessions for setting up the development environment	- Set up and develop GUI applications using popular frameworks in Python
Lecture 16	Project and Review	Integration of Learned Concepts	- Project Work - Review Session	Final Project Presentation, Q&A Sessions	Hands-on sessions for setting up the development environment	- Apply OOP concepts to a comprehensive project, Review and consolidate learning outcomes

Module 2: Advanced Python Concepts (16 Hrs)

Prerequisites for Module 2: Advanced Python Concepts

Intermediate Python Knowledge: Proficiency in fundamental Python concepts (data structures, functions, modules). Familiarity with libraries like NumPy and Pandas is beneficial. Basic Understanding of Concurrency: Awareness of concurrent programming concepts (threads, processes).

Recommended Reading/Preparation: Intermediate-level Python programming practice.

Tutorials or guides on Python libraries for data visualization (Matplotlib, Pandas) and multithreading.

Lecture Number	Topic	Pre-Reading Material	Subtopics	Post-Reading Material	Learning Methodology/Activity	Learning Outcomes
			- Threads in		-	
			Python -	Coding Exercises, Case	Practical sessions on starting and	- Implement threading in Python, manage
Lecture 1	Multithreading	Basics of Concurrency	Threading Module	Studies	managing threads in Python	concurrent tasks
			- Matplotlib for			
	Data Visualization in		Visualization -	Data Visualization Projects,	Creating visualizations using	- Perform statistical analysis using Python,
Lecture 2	Python	Statistics, NumPy	Pandas for Data	Practice Sessions	Matplotlib	visualize data using Matplotlib and Pandas
			- Socket Programming			- Create client-server communication using
	Socket Programming		Introduction -	Networking Project, Socket	Hands-on exercises for setting up	Python sockets, send and receive data over
Lecture 3	Basics	Networking Basics	Client-Server	Programming Tasks	server and client sockets	sockets
			- Chrome WebDriver		Automate web interactions using	
	Introduction to	Web Automation	Setup - Locating	Web Automation Tasks,	Selenium with Python, locate web	- Automate web interactions using Selenium with
Lecture 4	Selenium with Python	Fundamentals	Elements	Hands-on Practice	elements for automation	Python, locate web elements for automation
	Web Element	Manipulating Web	- Interacting with Web	Code Samples, Practical		- Interact with web elements, perform various
Lecture 5	Interactions	Elements	Elements	Exercises		actions on web pages using Selenium
					Baratical acceleration of the Character	
	Locating Elements by	Finding Elements by	- Locating Elements by	Hands-on Activities, Code	Practical sessions on using Chrome	- Locate and interact with HTML elements using
Lecture 6	Id	Attribute	Id	Implementation	WebDriver	their 'id' attribute in Selenium
					1	
	Locating Elements by	Finding Elements by	- Locating Elements by	Problem-Solving Tasks,		- Locate and interact with HTML elements using
Lecture 7	Name	Attribute	Name	Coding Exercises		their 'name' attribute in Selenium
	Locating Elements by		- Locating Elements by	Code Development,	Hands-on exercises for locating	- Locate and interact with HTML elements using
Lecture 8	XPath	Finding Elements by Path	XPath	Practical Scenarios	elements using various strategies	XPath expressions in Selenium
	Locating Hyperlinks by		- Locating Hyperlinks	Hands-on Exercises,	Locate and interact with hyperlinks	- Locate and interact with hyperlinks based on
Lecture 9	Link Text	Finding Elements by Text	by Link Text	Scenario Analysis	based on their text in Selenium	their text in Selenium
					Locate and interact with HTML	
	Locating Elements by		 Locating Elements by 	Code Implementation,	elements based on their tag name in	- Locate and interact with HTML elements based
Lecture 10	Tag Name	Finding Elements by Tag	Tag Name	Conceptual Exercises	Selenium	on their tag name in Selenium
					Locate and interact with HTML	
	Locating Elements by		 Locating Elements by 	Practical Sessions, Code	elements using their class name	- Locate and interact with HTML elements using
Lecture 11	Class Name	Finding Elements by Class	Class Name	Tasks	attribute in Selenium	their class name attribute in Selenium
					Locate and interact with HTML	
		Advanced Element		Code Samples, Hands-on	elements using CSS selectors in	- Locate and interact with HTML elements using
Lecture 12	CSS Selectors	Locating	- Using CSS Selectors	Practice	Selenium	CSS selectors in Selenium
					Understand the use of different	- Perform complex interactions with web
	Advanced Web	Complex Element	- Advanced	Real-world Scenarios,	strategies for locating elements in	elements, automate various user actions on web
Lecture 13	Element Interactions	Manipulation	Interactions	Project Development	Selenium	pages
		Integration of Learned	- Project Work -	Final Project Presentation,		
Lecture 14	Project and Review	Concepts	Review Session	Q&A Sessions	Hands-on sessions for setting up the	- Reinforce understanding through revision and
			- Revision		development environment	practice of Selenium concepts
			Exercises -	Problem-Solving Tasks,		
Lecture 15	Revision and Practice	Reinforcing Key Concepts	Practice Sessions	Coding Drills		
			- Assessment	Assessment, Recap of		
	Assessment and		Tasks - Recap	Module Learning		- Evaluate understanding through assessment,
Lecture 16	Conclusion	Evaluation and Recap	Session	Outcomes	Code Monitoring and Viva	recap and summarize Module 2 learnings

Overall Course Objectives:

Comprehensive Understanding: Gain a comprehensive understanding of Object-Oriented Programming and advanced Python concepts.

Practical Application: Apply learned concepts to solve real-world problems through hands-on projects and tasks.

Proficiency in Python: Attain proficiency in using Python for various tasks including GUI development, data visualization, concurrency, networking, and web automation

Evaluation and Assessment: Evaluate understanding through assessments, projects, and review sessions.

These outcomes aim to equip students with a solid foundation in Object-Oriented Programming principles and advanced Python concepts, enabling them to develop practical skills and apply Python for various tasks in software development and automation.
